EZ on the Earth
Easy on your budget!

It is easy to properly manage waste lamps, ballasts, batteries, and electronic scrap!

Did you know fluorescent lamps, high intensity (HID) lamps, batteries, ballasts, and electronic waste contains heavy metals including mercury? **Most of these wastes are regulated as a universal waste by the U.S. Environmental Protection Agency.**

EZ on the Earth™ introduces a revolutionary new program to recycle your fluorescent lamps, non-PCB ballasts, batteries, and e-scrap.

EZ on the Earth™ is easy to use!

1. Order as many containers as you need for your facility. The list of containers is on the back. For your convenience you can order online using your credit card at www.ol-energy.com or simply call toll free 888-596-0030. After the initial upfront fee, **you pay no additional fees!**

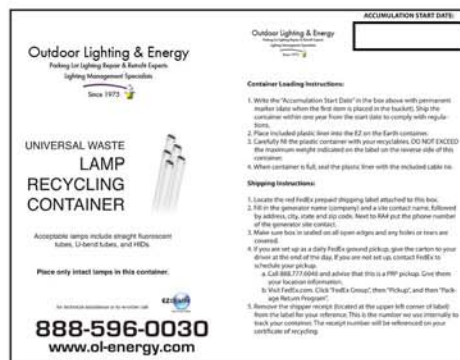

2. The EZ on the Earth containers will be shipped to you with everything you need to properly pack and ship your spent lamps, batteries, mercury devices, non-PCB ballasts, and electronics.

3. Simply fill the interior bag you receive per the instructions on the box with your spent items, seal the bag inside the container, seal the lid on the bucket (for applications requiring buckets), and tape the box closed.

4. Fill out the supplied shipping label with your facility's name and address. Call FedEx ground to pick up your full EZ on the Earth™ containers at your facility for shipment to one of our fully permitted processing and recycling facilities.

5. We provide a certificate of recycling, providing the generator label is complete.

This program is not available in Hawaii, Alaska, Maine, and Puerto Rico
